
Manager
② MergeBestSplits
global best split per open node
ApplySplitToTree
grow frontier at depth d
① local best splits
scan each feature's candidate thresholds → max gain
③ broadcast winning splits
Worker 1
f0
f3
f6
scan thresholds
t₁
local best: f3 ≥ t₁
Worker 2 — winning worker ★
f1
f4
f7
t
★ global winner: f4 ≥ t
Worker W
f2
f5
f8
t₂
local best: f8 ≥ t₂
④ left/right bitmap (value ≥ threshold)
⑤ bitmap broadcast — peer-to-peer
⑥ repeat — next depth d+1
